

Go Green and Save Green

According to the **American Council
for an Energy Efficient Economy** that...

- "After heating and cooling, water heating is typically the largest energy user in the home." As much as 15% to 25% of your energy use!
- "The most efficient systems available are generally gas fired!"
- "Even though electric models have a higher energy factor than fuel-burning models, electric resistance is a very expensive way to generate heat. It does not have great environmental benefits either, since electricity is only as clean and efficient as the fuel (often coal) that generates it."

"...gas water heaters work quicker than electric ones, so they produce more hot water in an hour. A gas water heater that holds 40-gallons may turn out as much hot water in an hour as 65-gallon electric one!"-

**California Energy Commission
Consumer Energy Center**

**Fully Installed Water Heaters
Starting at \$38 per month for 12
months Interest Free**
